1. Copy and paste the URL for your web application (e.g., Heroku):

2. Copy and paste the URL for your source code repository (e.g., GitHub):
    - https://github.com/adgar152369/CSE341
3. Briefly list and describe the elements of the application that are functioning.
    - https://dashboard.heroku.com/apps

4. Briefly describe any pieces of the assignment that are not yet working correctly.
    - For some reason I'm getting an error about connecting to Mongo, and a lot of other classmates have the same problem. I have looked up more updated methods in the past in this course, like "findByPk", and they have worked. So I will do the same with this error.

5. Briefly describe the "coolest" thing you learned while completing this assignment.
    - the coolest thing this week was learning to simply use the MongoDB GUI interface and implement documents.

6. If you could change this assignment to be more effective or helpful, what would you change?
    - This lesson specifically, I think there should be mentions about more updated methods of mongo / mongoose.

7. Please select the category you feel best describes your assignment:
    1 - Some attempt was made
    2 - Developing, but significantly deficient
    3 - Slightly deficient, but still mostly adequate
    4 - Meets requirements *
    5 - Shows creativity and excels above and beyond requirements

8. Provide a brief justification (1-2 sentences) for selecting that category.
Since I followed all of the videos, I have met the

requirements. But since I'm getting an error, I believe a 4 is accurate.
